Subject: Re: PFIZER-C4591001\_SAE\_EDP Report\_subject 10961031\_Inital Report\_04SEP2020

How are we making sure all of these SAEs are being entered in CC? We are reimbursed \$500 per SAE. But if they aren't entered...then we are doing volunteer work

The SOMs need to be double-checking this...but just want to make sure there is a process in place for that to happen.

Thank you, Kandy.

I just checked CC to see if they SAE had been entered on the study level page for Finance to invoice for it, and it is not in CC. Please make sure HOU gets this updated as per the Operations Manual.

All,

Please note that at visit 2-subject 10961031 was noted to have a positive pregnancy test result PRIOR to vaccination.

Site became aware at 15:58 CST on 04 SEP 2020.

SAE Report and EDP form was completed and Faxed to sponsor on 04 SEP 2020 at 23:52 CST.

EDC was updated at 23:40 CST on 04 SEP 2020.

## Case 1:21-cv-00008-MJT Document 116-3 Filed 10/02/23 Page 32 of 74 PageID #: 4204

To confirm-subject did not receive vaccination 2 AND had a negative urine pregnancy test result on 14 AUG 2020 PRIOR to receiving vaccination 1.

Subject has agreed to stay on trial for follow up and is aware she will no longer receive treatment.

\*\*\*Of note, there is NO EDP template or FAX Cover sheet templates in Firecrest or in previous correspondence to site. These were requested from Nancy today however, I did NOT delay reporting because of this. I used a Pfizer EDP template from another study to submit and a Ventavia Fax coversheet Template.

Lastly, I am attaching all the documents that were faxed today for your convenience.

Thanks again,

Subject: RE: Performance forms- FYI

For the Jailyn and Nadia report-

Back in Aug- during a routine stop in FW- Kandy observed COVID IP boxes left out on the counter, full exposed to anyone that entered the room could see.

The current SOM was notified, then both unblinded CRC's were notified of finding. Kandy then reviewed the process of having IP boxes broken down and reminded that the IP boxes which has patient information have to be securely placed up as patient's are dosed.

The boxes were then broken down, and placed in secured black tote for storage. Both CRC's vebally understood the blinding process. No training was documented, or other communication was given.

RD Kandy Downs

Principal Investigator: XXXXX, XX Protocol: C4591001

Site Number: XXX Date: September 17, 2020

**Regarding:** IMPALA Randomization and drug assignment confirmation printouts in research charts

This Note to File serves as notification that confirmation printouts of research participant drug assignments will not be placed within participant charts for study C4591001. Inclusion of the drug assignment confirmation will disclose drug dosage information contraindicated for study blinding. It is for this purpose that the confirmation of drug assignment is located in Complion within the unblinded binder. This note to file addresses IMPALA drug assignment confirmation requested in study source document versions 1 through 5.

An update the source document removing this requirement has been created in follow-up to this Note to File.

Subject: [EXTERNAL] Pfizer\_C4591001\_COVID-19\_Amend 6 Question

Good Morning Arturo,

I am working on updating source documents for the 3 Ventavia sites so when Amendment 6 is approved we will be ready. As I was reading through the changes for the inclusion exclusion criteria, I am needing some clarification.

In Amendment 6, Inclusion 3 states "Healthy participants who are determined by medical history, physical examination (if required), and clinical judgment of the investigator to be eligible for inclusion in the study.

**Note**: Healthy participants with preexisting stable disease, defined as disease not requiring significant change in therapy or hospitalization for worsening disease during the 6 weeks before enrollment, can be included. Specific criteria for <a href="Phase 3">Phase 3</a> participants with known stable infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV) can be found in Section 10.8."

Exclusion 2 states "Phases 1 and 2 only: Known infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV)."

However, per protocol phase 2 and 3 are still combined (Phase 2/3). Those 2 criteria seem to contradict each other. Can you please provide some clarification if patients with HBV/HCV/HIV are excluded from the study for phase 2/3? Thank you!

Best Regards,

Becca

Hi Cordy,

As previously mentioned on our phone call today, here is a summary/list of items to review:

- Shipment Receipt Invoices need added to Complion for review.
- Jina needs to complete Protocol Amendment 4 & 5 trainings in Firecrest. You need to complete Protocol Amendment 5.
- Both need to complete the V5 training: IP Preparation, Reconstitution, and Administration.
- CVs for you and Jina need filed. GCP & Impala training certificate needs filed.
- URGENT: Jina needs to Read & Acknowledge the IP documents flagged for her in Firecrest. This needs to be done ASAP.
- URGENT: Temperature logs/records need uploaded to Complion.
- Blinding Plan & Secrecy Agreement need loaded to Complion.
- Reminder: Kit Verification App can be used on b2 and placebo IPAL and <u>first</u> Drug Assignment report from Impala (subsequent doses need the second verification signature). When used, please indicate usage by writing, "KV#2."
- Various preparation records are missing from Complion, but specifically for the following subjects: 10851012, 10851016, 10851028, 10851032, 10851035, 10851036, 10851061, 10851073, and 10851082.
- Placebo IPAL is good—I didn't note any issues. Disposition section needs completed upon destroying the vial. Reminder: save the carton. You may break this down and flatten it, but ensure the label is not harmed & is still legible. This goes for all IP containers.
- Preparation Record for 10851001, 10851005, 10851007, and 10851008 indicates a volume of 1.7mL Sodium
  Chloride was withdrawn instead of 1.2mL. You indicated this was likely a transcription error due to the final
  volume needing to be 1.7mL. Please correct this preparation record and replace the one in Complion with
  the updated copy.
- Yellow b2 IPAL:
  - No disposition is documented. Please ensure this is performed (with double verification) and document.
  - The Dispensed column is completed incorrectly. Those that were dispensed b2 from a vial already dispensed need to have it indicated as "N/A" instead of "D-1."
  - Subject 10851029 is not documented on the IPAL (Container 046173).
  - Below is a screenshot of an example b2 IPAL. Note the Dispensed Column and the Disposition columns:

DOSE-FINDIN	A PHASE 1/2/3 P G STUDY TO E Y OF SARS-CO ULTS	VALUATE	THE SAFE
	Medicinal Produ	T-	Str
Units Per Conta 1 vial per car	JOSEPH D.	LABEL)	25
Receipt or Dispense Date dd/Mmm/yyyy	□ Lot Number □ Kit Number X Container Number □ Other (specify)  Or Shipment ID #4	Study Subject ID Number (SSID)	Quantity of Containers Received (R) or Dispensed (D) or Undispensed (U)

Ex. 18

Sub	iect	Number:	1		

### \*\*PLEASE FILE ALL NTFS IN THE PATIENT'S CHART ON THE RIGHT SIDE OF CHART BEHIND PROGRESS NOTES\*\*

ICF	Reviewed	Finding
Current version of ICF is used		
Signatures are consistent with no obvious mismatch		
Correct dates used by the patients		
Printer copies are clear (not sloppy, cutting off footers, etc)		
Consistency in where the ICF documentation process form is kept		
Screening ICF document is embedded in the screening source		
Re-consent ICF documentation is on top of the revised ICF		
ICF documentation form comment section documents any questions and answers		
Updated ICF documentation page has blanks for the CRC initials instead of checkboxes		
ICF was checked for Quality Assurance by the consenter		
Proper ICF QC process		
Verify that any paper consent used have been scanned into eConsent		
Progress Noting	Reviewed	Finding
Anything out of the ordinary is explained in the progress note		
Initials are consistent with the subject information sheet, or progress noted		
Typically acute AEs or CMs are explained if ongoing from visit to visit		
Schedule of Events	Reviewed	Finding
Remove from charts all together (do not replace with new ones)		
Verify Visits 2 and beyond dates are within window (Print the Firecrest Visit Scheduler and place copy on left side of chart on top of Patient Information Sheet)		
Randomization Confirmations	Reviewed	Finding
Randomization confirmations needs to come out of the charts and line through file instructions in source and state "see NTF". File NTF in each chart		
Drug assignments need to come out (if they were in there) and line through file instructions in source and state "see NTF". File NTF in each chart		
Write Overs	Reviewed	Finding
CRC correctly making changes (line through, initial, date)		
Patients making changes correctly on Consents (line through, initial, date)		
Source Version	Reviewed	Finding
Using correct, most current version of source (verify version date)		

Subjec <sup>*</sup>	t Number:					

KELLER- Add NTF to each chart for using wrong source versions		
Risk Factors	Reviewed	Finding
Consistent with demographics		
Those that need to go in MedHx are listed there		

Visits Procedures	Reviewed	Finding
Conducted in a stepwise manner, per protocol		
Source Completion	Reviewed	Finding
No blanks in charts		
CM Logs	Reviewed	Finding
Indication matches medical history		
MedHx start dates and CM start dates line up (example; med shouldn't start prior to condition)		
Contraception in WOCBP	Reviewed	Finding
Added to con meds and/or med history		
Tubal ligation- documenting bilateral, etc		
Source Document of WOCBP	Reviewed	Finding
Signature statement only signed if the subject's methods of contraception could change while in the study (ADD NTF to each chart that will address discrepancy of signature statement)- DO NOT CROSS OUT SIGNATURES NOW		
Medical History	Reviewed	Finding
Prior source versions had "Yes/No" boxes for each body system- verify that "yes" was checked for ALL systems. (Have CRC correct this and write a note confirming that all systems were assessed at the visit, however, the question was misread initially and only the body system that the patient has a medical history in, was checked).  VERSION #5 is most current- should check "yes" that all body systems have been asked about.		
Procedures listed in MedHx along with indication for procedure		
Devices	Reviewed	Finding
Device and/or app changes and issues documented clearly (e.g., Subject requested a device at screening visit. At next visit, requested to use the app. No documentation on the progress note.)		
E-diary and AEs	Reviewed	Finding
Symptoms noted in the e-diary regardless of if they are ongoing after Day 7 are not to be reported as AEs		

Patients outside of the reactogenicity subset if they have symptoms after vaccine should be reporting in the illness visit e-diary page and not as AEs

E-diary Printouts

E-diary Printouts

E-diaries are printed on Day 8 (after 7 day period) and signed by the PI as soon as possible (within 2-3 days from printing)

Patient ID/initials and Study number are on the e-diary print-out

Weekly eDiary review log completed

Weekly eDiary review log completed

Subject: RE: Pfizer C3671008 | Crystal's Ventavia Sites | Consider Source Revisions: BMI, ICF Process

Documentation, Lab Collection

Hi Marnie, Kandy, and Brook,

I wanted to follow-up to see if there has there been any internal discussions regarding the ICF documentation considerations I mentioned below?

Additionally, I have one more possible suggestion. I've re-reviewed the Lab Collection section of your source worksheets and I wanted to know if you all have a separate document that details the collection & processing times that may not been previously provided?

CRAs must confirm that sites are in compliance with the "Blood Specimen Chain of Custody". Our protocol (section 8.1.4 Immunogenicity Assessment) spells out that each specimen should be drawn and processed as indicated in the Lab manual:

- 1. Draw blood
- 2. Allow the blood to clot at room temperature for a minimum of 30 minutes and a maximum of 2 hours.
- 3. Separate the serum by centrifugation at room temperature at 1,000 to 1,300 g (check the correct RPM is selected) for 10 to 15 minutes.
- 4. Remove the serum from the Vacutainer® tubes using a sterile transfer pipette to sterile cryovials (up to the 1.8 mL graduation). Transfer serum into 2 **SEND** cryovials (remaining serum will go into cryovials designated as **RETAIN**).
- 5. Samples must be stored in a manual defrost freezer at -15 ° C or colder.

FDA requires that any specimen collected have documentation to prove that the protocol requirements were followed. Without this proof, it's plausible that specimens could be removed/disallowed from our analyses.

So – each site can document either in a lab log or directly in subject source documents the following details:

- The time a required specimen was drawn (and by whom at the site)
- The length of time the specimen(s) were allowed to sit at room temp (start and stop is ideal, but at least some documentation that site complied with specimen handling from A-Z is necessary).
- The time specimens were spun down (per protocol)
- The time specimens were separated and frozen

OR a comprehensive comment can be recorded confirming that the lab specimens were collected and processed per the protocol and lab manual.

If you all have not previously collected this information, would you consider updating your lab collection question per the screenshot below to note: Was pre-vaccination blood draw for serologic assessment (~ 15 ml) collected "and processed according to the protocol/lab manual?"

This WAS a finding in one of my current Pfizer studies and sites were required to provide or update 3 years later. You all can imagine the workload this created.....so I would like to avoid this being an issue during this study and ensure this isn't a finding for any of my sites.

Pfizer C3671008 Source Documents Version 2 17Jun2020KW Site 1028 PI: Cynthia Robbins, MD Screening and Vaccination (Visit 1) Day -28 to Day 1					
Lab Collection		☐ Not Done			
Was pre-vaccination blood draw for serolo (pre-vaccination blood collection should take place on Yes \square No, reason:					
Date collected: 67 Jul 2020	(dd/mmm/yyyy)	Time collected: 11:50 (24hr)

**Subject:** RE: Pfizer C3671008 | Crystal's Ventavia Sites | Consider Source Revisions: BMI & ICF Process Documentation

Hi Mercedes,

Thank you very much for discussing this internally, considering my input, and confirming that your BMI documentation will remain unchanged.

Has there been any discussion regarding the ICF documentation considerations?

- I wanted this to be an open discussion and provide you all with suggestions as this was never a directive. If this documentation will remain unchanged, are all SCs aware of what dates need to be captured to avoid queries?
  - o What will you all capture for the "ICF Date" for all sites the ICF version date or the ICF revised version

Thanks, Crystal

Subject: RE: Pfizer C3671008 | Crystal's Ventavia Sites | Consider Source Revision for BMI

(Stella.Alaw@pfizer.com) <Stella.Alaw@pfizer.com>; Furlow, Danielle <Danielle.Furlow@iconplc.com>

#### Crystal

We will continue to put the actual BMI number as we have in the source vs a yes or no checkbox. A yes or no checkbox leaves us open to way more errors if the CRC isn't documenting the actual BMI number.

Thanks,

## **Mercedes Livingston, CCRC**

Subject: RE: Pfizer C3671008 | Crystal's Ventavia Sites | Consider Source Revisions: BMI & ICF Process Documentation

Hello Ventavia Team,

I apologize for sending another email, but wanted to offer another suggestion. I would ask that you consider revising your ICF Process documentation worksheet to capture the ICF "Version" Date and the "ICF Revised Version Date" as this

information is what is provided on the actual ICFs that the SCs have access to vs. IRB approval date, which they need to know off hand, review Advarra CIRB, or check eISF to obtain.

As you can see in the screenshot below, Subject #1058-1006 has the ICF Date error-corrected to the current ICF version date noted per the footer of the ICF (which is correct as 01MAY2020); however, this IRB Approval Date is incorrect as this ICF was IRB-approved on 02JUN2020 and not 01JUN2020, so my co-monitor for Roberts SMV 02 will be issuing a query in EDC to error-correct. I talked to several of my Primary SCs and you all have worked with Advarra before and they do typically have the ICF Revised Version date the same as the IRB App. Date, but I warned to not rely on this solely as it is not always the case, and this is a perfect example.

I am keeping detailed notes of all the approvals at each of your sites and encourage you all to do the same to ensure that most current version is always utilized as applicable for the date the subject consents.

Pfizer C3671008 Source Documents Version 3.1 08Jul2020KW Site 1658 Pl: John Paul Roberts, MD Screening and Vaccination (Visit 1) Day -28 to Day 1
Date of Screening and Vaccination Visit: 09 / \UL \ \ZOZO \ MMM YYYY
Informed Consent
ICF DATE: 89 Str 12020 IRB Approval Date: 01 / Jun / 2020
Date / Time Informed Consent Signed: 09 / Sul / 2020 DD/MMM/ YYYY 13:2 6(24 hr)
Signee is: Maternal Study Subject (24-Month) Maternal Study Subject (12-Month)
Check box if task was completed

Subject: Pfizer C3671008 | Crystal's Ventavia Sites | Consider Source Revision for BMI

Importance: High

Hello Ventavia Regional Directors, Chief Operating Officers, Site Operations Managers, and Site Managers,

I know that you all have made recent revisions to your source worksheets and I'd like you to consider revising your OB Exam source regarding the BMI. We've previously discussed that you all will update your process by capturing subject's weights at Visit 1 so that the recommended needle size can be confirmed and if the medical records don't capture the subject's height, you all will copy the subject's driver's license and provide this with the source worksheets, or you will confirm & record at Visit 1 (perhaps on the vitals page).

Currently, you all provide and exact calculation of the BMI and with a couple of sites, we've agreed that the moving forward, sites will calculate BMI based on the Adult BMI Calculator from the cdc.gov website: <a href="https://www.cdc.gov/healthyweight/assessing/bmi/adult\_bmi/english\_bmi\_calculator/bmi\_calculator.html">https://www.cdc.gov/healthyweight/assessing/bmi/adult\_bmi/english\_bmi\_calculator/bmi\_calculator.html</a> and either record this or print/file this page in the subject's chart.

As the protocol request that you confirm subject's BMI to be  $< 40 \text{ kg/m}^2 \text{ via pre-pregnancy or at the } 1^{\text{st}} \text{ OB Appt. during}$  the current pregnancy (must be documented via MRs), would you consider making this a Yes/NO checkbox vs. an exact

value and that way, we can avoid additional queries or any potential findings when the calculations don't match. Screenshot below of source example.

Your thoughts?

Pfizer C3671008 Source Documents Version 3.1 08Jul2020KW Site 1058 PI: John Paul Roberts, MD Screening and Vaccination (Visit 1) Day -28 to Day 1

Not Done		
*If yes, specify start date of LMP:		
Calendar, etc):		
25: 3 kg/m² (If BMI is >40 kg/m², subject will be screenfailed)		
*If yes, date performed:		

Kind regards, Crystal

Jen,

I just wanted to make sure you are aware of this email and all patients that were not put in Impala directly after the ICF need to have a protocol deviation written up (only on the log, not reported).

These have NOT been flagged for you, since we were waiting on the response, so if you can also let the other girls know.

Thank you ma'am.

Ok we agree with that! The only thing that was done out of any type of order was the subject being put in Impala to get the screening number. It was not done directly after the consent process. It was done before randomization obviously but that is the only thing that was done out of order.

So just to verify, this would or would not be a deviation?

#### Hello;

I actually got some clarification from the clinicians. It is not necessarily a protocol deviation. However, there are some procedures that need to be completed before randomization, like blood draw, physical exam. There is going to be a study communication clarifying this item shortly.

Let me know if you have any questions.

Subject: Pfizer - C4591001 - COVID-19 Vaccine - Protocol Question

Good afternoon, Dr. Alfaro

I am hoping you can provide me with some clarification regarding the protocol visit procedures.

The protocol states that the visit procedures are anticipated to be completed in a stepwise manner. However, if a procedure was not performed in a stepwise manner, should it be recorded as a protocol deviation? For example, the IWRS screening ID was not assigned until after the vital signs.

Thank you for your help!
